IT WASN'T ONLY THE WIDE RANGE OF TANKERS THAT ATTRACTED SHOW GOERS TO THE TIEMAN STAND – TIEMAN ALSO DISPLAYED ITS NEWLY RELEASED WHITING TRUCK ROLLER SHUTTER DOOR RANGE, INCLUDING A REMOTE CONTROLLED POWERED VERSION; THE AIRGO™ FAN BY BIG ASS FANS; AND A WIDE RANGE OF TAIL LIFTS TO SUIT A MULTITUDE OF APPLICATIONS.

Whiting by Tieman roller shutter truck doors are available as an insulated freezer door, insulated chiller door, aluminium dry freight door, plywood dry freight door, and all with the ability to be powered with the Electrolift Door Lift System. The remote controlled Electrolift is a new addition to the truck door product range being offered by Tieman and its ease of use was clearly demonstrated at the stand on the simulated body fitted with two roller shutter doors.

Representing the Big Ass Fans by Tieman range was the portable, rugged and versatile 2.4 metre vertical AirGo™. Delivering a cooling airflow at up to 45 metres, it provides high performance with an exceptionally low noise output. It has a 746W motor and a variable fan speed control up to a maximum speed of 180rpm. Big Ass fans are high volume, low speed fans designed to increase air flow in workshops and warehouses to enhance working conditions for employees which can then lead to

increased performance and productivity. The range includes mobile vertical fans to very large ceiling mounted fans for all commercial or industrial applications. The wide range of Tieman and Dhollandia by Tieman tail lifts displayed suit applications large and small. At the smaller end of the scale were the new release 500kg lift capacity TK505 AL tuck-away tail lift with a robust aluminium platform, and the TD350HLWT wheelchair lift with a 350kg

lift capacity, the TT755 ML conventional tail lift with a 750kg lift capacity and a powered closer function and the Dhollandia DH-LC 750 cantilever tail lift also with a 750kg lift capacity. Tail lifts displayed for the light distribution market were the Dhollandia DH-SM41 1000 slider tail lift and DH-RC20 1000 tuck away tail lift, each with a lift capacity of 1000kg.

At the heavier end of the spectrum was the Dhollandia DH-SSU 2500 slider tail lift with a lift capacity of 2500kg. It is designed to serve the heavy-duty needs of the distribution market. The heavy-duty design and construction is complete with a non-slip steel/aluminium platform, auto levelling function at the ground, electrical safety valves to all cylinders, chromed S/S (INNOX) cylinder rods and low maintenance bushes. Also suited to the heavy-duty distribution market are the Dhollandia DH-LSUA 2000 cantilever tail lift and the DH-LMA 2000 cantilever tail lift which both feature a lift capacity of 2000kg. All Tieman tail lifts and roller shutter doors are backed by a national mobile service fleet of over 60 vans.
